53.1 Functions	106
Index	107

1 Package hal

1.1 Modules

- **charts** (*Section 2, p. 9*)
 - **bars**: Create easily bar charts
(*Section 3, p. 10*)
 - **correlation**: Everything you need to create correlation charts
(*Section 4, p. 12*)
 - **plotter**: Show elegant plots in any dimension.
(*Section 5, p. 13*)
- **files** (*Section 6, p. 17*)
 - **models**: Main entities in files, such as documents, folders.
(*Section 7, p. 18*)
 - **save_as**: Save various data to file
(*Section 8, p. 29*)
- **internet** (*Section 9, p. 30*)
 - **async_utils**: Async-fetch urls
(*Section 10, p. 31*)
 - **engines**: Abstract search engines.
(*Section 11, p. 32*)
 - **github**: Common classes and entities in Github
(*Section 12, p. 34*)
 - **gmail** (*Section 13, p. 39*)
 - **google** (*Section 14, p. 41*)
 - * **gauthenticator** (*Section 15, p. 42*)
 - **parser**: Parse anything there is on the Internet.
(*Section 16, p. 44*)
 - **selenium_bots**: Some utils methods for a selenium web-driver
(*Section 17, p. 46*)
 - **web**: Deal with web-pages.
(*Section 18, p. 48*)
 - **youtube**: Get rss feed for youtube channel.
(*Section 19, p. 51*)
- **maths**: MATHS: important and scalable math functions
(*Section 20, p. 53*)
 - **crypt**: Perform fast hash, encryption and calculations related to cryptography.
(*Section 21, p. 54*)
 - **maths**: A few elegant and powerful mathematical functions.
(*Section 22, p. 64*)
- **ml** (*Section 23, p. 67*)
 - **analysis** (*Section 24, p. 68*)
 - * **correlation**: Correlate values in arrays producing fancy good-looking matrices
(*Section 25, p. 69*)
 - **data** (*Section 26, p. 71*)
 - * **parser**: Parsers for raw databases
(*Section 27, p. 72*)
 - **features**: Collection of methods to find weights of features and select the best ones.
(*Section 28, p. 75*)
 - **models** (*Section 29, p. 76*)
 - * **classification**: Prediction methods based on classification algorithms.

- (Section 30, p. 77)
 - * **pipelined**: Prediction methods based on multiple models mixed up.
(Section 31, p. 78)
 - * **regression**: Prediction methods based on regression algorithms.
(Section 32, p. 79)
 - * **time_series**: Multi-purpose prediction methods to be used in time-series.
(Section 33, p. 80)
- **predict**: ” General model to make prediction about everything.
(Section 34, p. 82)
- **utils** (Section 35, p. 84)
 - * **matrix**: Functions to deal with matrices.
(Section 36, p. 85)
 - * **misc**: Various tools and utilities to deal with database and machine learning.
(Section 37, p. 88)
- **mongodb** (Section 38, p. 89)
 - **utils**: Various utilities to deal with MondoDB databases
(Section 39, p. 90)
- **profile** (Section 40, p. 91)
 - **mem**: Profile OS memory
(Section 41, p. 92)
 - **performance**: Perform benchmarks and tests on your PC.
(Section 42, p. 93)
- **streams** (Section 43, p. 95)
 - **pretty_table**: Pretty prints table in SQL style
(Section 44, p. 96)
- **strings** (Section 45, p. 98)
 - **utils**: Typical operations on strings made easy
(Section 46, p. 99)
- **tests** (Section 47, p. 100)
 - **utils**: Tools to ease testing process
(Section 48, p. 101)
- **time** (Section 49, p. 102)
 - **profile**: Tired of formatting ETA times? This is just for you
(Section 50, p. 103)
 - **utils**: Parse, convert time formats
(Section 51, p. 104)
- **wrappers** (Section 52, p. 105)
 - **methods**: Typical (and useful) function wrappers
(Section 53, p. 106)

1.2 Variables

Name	Description
<code>--package--</code>	Value: None

2 Package hal.charts

2.1 Modules

- **bars**: Create easily bar charts
(Section 3, p. 10)
- **correlation**: Everything you need to create correlation charts
(Section 4, p. 12)
- **plotter**: Show elegant plots in any dimension.
(Section 5, p. 13)

2.2 Variables

Name	Description
__package__	Value: None

3 Module *hal.charts.bars*

Create easily bar charts

3.1 Functions

```
create_bar_chart(title, x_labels, y_values, y_label)
```

```
:param title: str  
    Title of chart  
:param x_labels: [] of str  
    Names for each variable  
:param y_values: [] of float  
    Values of x labels  
:param y_label: str  
    Label of y axis  
:return: Subplot  
    Bar chart
```

```
create_multiple_bar_chart(title, x_labels, mul_y_values, mul_y_labels, normalize=False)
```

```
:param title: str  
    Title of chart  
:param x_labels: [] of str  
    Names for each variable  
:param mul_y_values: [] of [] of float  
    List of values of x labels  
:param mul_y_labels: [] of str  
    List of labels for each y value  
:param normalize: bool  
    True iff you want to normalize each y series  
:return: Subplot  
    Bar chart
```

create_sym_log_bar_chart(*title*, *x_labels*, *y_values*, *y_label*)

```
:param title: str
    Title of chart
:param x_labels: [] of str
    Names for each variable
:param y_values: [] of float
    Values of x labels
:param y_label: str
    Label of y axis
:return: return
    Sym-log bar chart
```

4 Module `hal.charts.correlation`

Everything you need to create correlation charts

4.1 Functions

```
create_correlation_matrix_plot(correlation_matrix, title, feature_list)
```

```
:param correlation_matrix: [] of []  
    Correlation matrix of features  
:param title: str  
    Title of plot  
:param feature_list: [] of str  
    List of names of features  
:return: void  
    shows the given correlation matrix as image
```

5 Module `hal.charts.plotter`

Show elegant plots in any dimension.

5.1 Class `Plot2d`

object 
 `hal.charts.plotter.Plot2d`
 2d plot

5.1.1 Methods

`scatter`(*vector_x*, *vector_y*)

```
:param vector_x: vector in x axis
:param vector_y: vector in y axis
:return: 2d scatter plot
```

`param`(*function_x*, *function_y*, *min_val*, *max_val*, *points*)

```
:param function_x: function in x value
:param function_y: function in y value
:param min_val: minimum value
:param max_val: maximum value
:param points: number of points to display
:return: 2d parametric graph of given function from min to max
```

`plot`(*function*, *min_val*, *max_val*, *points*)

```
:param function: function to plot
:param min_val: minimum value
:param max_val: maximum value
:param points: number of points
:return: plot 2d function
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __init__(), __new__(), __reduce__(),
__reduce_ex__(), __repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

5.1.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>--class--</code>	

5.2 Class Plot3d

5.2.1 Methods

scatter(*vector_x*, *vector_y*, *vector_z*)

```

:param vector_x: vector in x axis
:param vector_y: vector in y axis
:param vector_z: vector in z axis
:return: plot 3d scattered points
  
```

param(*function_x*, *function_y*, *function_z*, *min_val*, *max_val*, *points*)

```

:param function_x: function in x
:param function_y: function in y
:param function_z: function in z
:param min_val: minimum
:param max_val: maximum
:param points: number of points
:return: 3d parametric graph of given function from min to max
  
```

```
plot(function, min_x, max_x, points_x, min_y, max_y, points_y)
```

```
:param function: function to plot
:param min_x: minimum of x-values
:param max_x: maximum of x-values
:param points_x: points in x axis
:param min_y: minimum of y-values
:param max_y: maximum of y-values
:param points_y: points in y axis
:return: plot 3d function
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __init__(), __new__(), __reduce__(),
__reduce_ex__(), __repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

5.2.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

5.3 Class Plot4d

```
object └─
          hal.charts.plotter.Plot4d
```

4D plot generator with slider

5.3.1 Methods

```
scatter(vector_x, vector_y, vector_z, vector_w)
```

```
:param vector_x: vector in x axis
:param vector_y: vector in y axis
:param vector_z: vector in z axis
:param vector_w: vector in w axis
:return: plot 4d scattered points
```

```

plot(function, min_x, max_x, min_y, max_y, min_z, max_z, precision=0.5,
kind="contour")

:param function: function to plot
:param min_x: minimum of x-values
:param max_x: maximum of x-values
:param min_y: minimum of y-values
:param max_y: maximum of y-values
:param min_z: minimum of z-values
:param max_z: maximum of z-values
:param precision: precision
:param kind: slice: x cont -> 3d plot with y, z variables in plane
            and w as "z"-axis contour: x cont -> 3d plot with y,z variables in
            plane and w colored
:return: plot 4d function

```

Inherited from object

```

__delattr__(), __format__(), __getattr__(), __hash__(), __init__(), __new__(), __reduce__(),
__reduce_ex__(), __repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()

```

5.3.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

6 Package *hal.files*

6.1 Modules

- **models:** Main entities in files, such as documents, folders.
(Section 7, p. 18)
- **save_as:** Save various data to file
(Section 8, p. 29)

6.2 Variables

Name	Description
<code>--package--</code>	Value: None

7 Module `hal.files.models`

Main entities in files, such as documents, folders.

7.1 Variables

Name	Description
<code>BAD_CHARS</code>	Value: [".", ":", "\"", "\xe2\x80\x99", "&", "720p", "1080p", "y...]
<code>RUSSIAN_CHARS</code>	Value: ["\xd1\x88", "\xd0\xb0", "\xd0\xb1", "\xd0\xbb", "\xd0\xb...]
<code>VIDEO_FORMAT</code>	Value: [".", ".3g2", ".3gp", ".amv", ".asf", ".avi", ".drc", ".f...]
<code>ARCHIVE_FORMAT</code>	Value: [".7z", "._?", ".?Q?", ".?Z?", ".a", ".ace", ".afa", ".a...]
<code>SUBTITLE_FORMAT</code>	Value: [".srt", ".sub", ".sbv"]
<code>TEXT_FORMAT</code>	Value: [".cnf", ".conf", ".cfg", ".chm", ".epub", ".log", ".asc"...
<code>IMAGE_FORMAT</code>	Value: [".ani", ".bmp", ".cal", ".fax", ".gif", ".img", ".jbg", ...]
<code>AUDIO_FORMAT</code>	Value: [".3gp", ".aa", ".aac", ".aax", ".act", ".aiff", ".amr", ...]
<code>PATH_SEPARATOR</code>	Value: "/" if "posix" in os.name else "\\"

7.2 Class `FileSystem`

object —
 `hal.files.models.FileSystem`

Models a folder/file in a OS

7.2.1 Methods

`__init__`(*self*, *path*)

:param path: string
 Path to file

Overrides: object.__init__

`fix_raw_path`(*path*)

:param path: string
 Path to fix

:return: string
 Right path

`remove_year`(*name*)

:param name: string
 Name to edit

:return: string
 Given string bu with no years.

`remove_brackets`(*name*)

:param name: string
 Name to edit

:return: string
 Given string bu with no brackets

```
extract_name_max_chars(name, max_chars=64, blank=" ")
```

```
:param name: string
    Name to edit
:param max_chars: int
    Maximum chars of new name
:param blank: string
    Char that represents the blank between words.
:return: string
    Name edited to contain at most max_chars (truncate to nearest word)
```

```
prettify(name, blank=" ")
```

```
:param name: string
    Name to edit
:param blank: string
    Default blanks in name.
:return: string
    Prettier name from given one: replace bad chars with good ones.
```

```
ls_dir(path, include_hidden=False)
```

```
:param path: string
    Path to directory to get list of files and folders
:param include_hidden: bool
    Whether to include hidden files in list.
:return: list
    List of paths in given directory.
```

```
ls_recurse(path, include_hidden=False)
```

```
:param path: string
    Path to directory to get list of files and folders
:param include_hidden: bool
    Whether to include hidden files in list.
:return: list
    List of paths in given directory recursively.
```

list_content(*path*, *recurse*, *include_hidden=False*)

:param *path*: string
 Path to directory to get list of files and folders
:param *recurse*: bool
 Whether to recurse into subdirectories or not.
:param *include_hidden*: bool
 Whether to include hidden files in list.
:return: list
 List of paths in given directory recursively.

is_archive_mac(*self*)

:return: True iff document is an MACOSX archive.

is_russian(*self*)

:return: True iff document has a russian name.

trash(*self*)

:return: void
 Trash given file/folder

rename(*self*, *new_path*)

:param *new_path*: string
 New path to use
:return: void
 Rename to new path

Inherited from object

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

7.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

7.3 Class Document

object —

hal.files.models.FileSystem —

hal.files.models.Document

File with content in a OS

7.3.1 Methods

`__init__(self, path)`

:param path: string
Path to file

Overrides: object.__init__

`move_file_to_directory(file_path, directory_path)`

:param file_path: string
Path to file to move
:param directory_path: string
Path to target directory where to move file
:return: void
Move file to given directory

move_file_to_file(*old_path*, *new_path*)

```
:param old_path: string
    Old path of file to move
:param new_path: string
    New path (location) of file
:return: void
    Move file from old location to new one
```

write_data_to_file(*data*, *out_file*)

```
:param data: string
    Data to write to file.
:param out_file: string
    Path to output file.
:return: void
    Writes given data to given path file.
```

extract_name_extension(*file_name*)

```
:param file_name: string
    Name of file
:return: tuple string, string
    Name of file, extension of file
```

get_path_name(*self*)

```
:return: tuple string, string
    Name of path, name of file (or folder)
```

is_video(*self*)

```
:return: True iff document is a video.
```

is_subtitle(<i>self</i>) <hr/> : return: True iff document is a subtitle.
--

is_text(<i>self</i>) <hr/> : return: True iff document is a text file.

is_image(<i>self</i>) <hr/> : return: True iff document is an image.

is_audio(<i>self</i>) <hr/> : return: True iff document is an audio.

is_hidden(<i>self</i>) <hr/> : return: bool True iff path is hidden

Inherited from *hal.files.models.FileSystem*(Section 7.2)

extract_name_max_chars(), fix_raw_path(), is_archive_mac(), is_russian(), list_content(),
ls_dir(), ls_recurse(), prettify(), remove_brackets(), remove_year(), rename(), trash()

Inherited from object

__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()

7.3.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

7.4 Class Directory

Folder of a OS

7.4.1 Methods

`__init__(self, path)`

:param path: string

Path to file

Overrides: object.__init__

`create_new(path)`

:param path: string

Path to directory to create

:return: void

Creates new directory

`get_path_name(self)`

:return: tuple string, string

Name of path, name of file (or folder)

`is_empty(self)`

:return: Bool

True iff empty

Inherited from `hal.files.models.FileSystem`(Section 7.2)

`extract_name_max_chars()`, `fix_raw_path()`, `is_archive_mac()`, `is_russian()`, `list_content()`,

ls_dir(), ls_recurse(), prettify(), remove_brackets(), remove_year(), rename(), trash()

Inherited from object

__delattr__(), __format__(), __getattribute__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),

Name	Description
<i>Inherited from object</i>	
__class__	

7.5 Class MP3Song

7.5.1 Methods

__init__(self, path) <hr/> :param path: str Location of .mp3 file Overrides: object.__init__
set_name(self, name) <hr/> :param name: str Song's title :return: void Sets song's title

```
set_artist(self, artist)

:param artist: str
    Song's artist
:return: void
    Sets song's artist
```

```
set_album(self, album)

:param album: str
    Song's album
:return: void
    Sets song's albu
```

```
set_nr_track(self, nr_track)

:param nr_track: int
    Number of track
:return: void
    Sets song's track number
```

```
set_year(self, year)

:param year: int
    Year of song
:return: void
    Sets song's year
```

```
set_genre(self, genre)

:param genre: str
    Genre of song
:return: void
    Sets song's genre
```

Inherited from hal.files.models.FileSystem(Section 7.2)

extract_name_max_chars(), fix_raw_path(), is_archive_mac(), is_russian(), list_content(),

ls_dir(), ls_recurse(), prettify(), remove_brackets(), remove_year(), rename(), trash()

Inherited from object

__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),

7.5.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

8 Module *hal.files.save_as*

Save various data to file

8.1 Functions

save_dicts_to_csv(*dicts*, *output_file*)

```
:param dicts: [] of {}
    Dictionaries with same values
:param output_file: str
    Path to output file to write data
:return: void
    Saves .csv file with posts data
```

save_matrix_to_csv(*headers*, *data*, *output_file*)

```
:param headers: [] of str
    Column names
:param data: matrix ([] of [])
    Data
:param output_file: str
    Path to output file to write data
:return: void
    Saves .csv file with data
```

8.2 Variables

Name	Description
<code>--package--</code>	Value: <code>'hal.files'</code>

9 Package *hal.internet*

9.1 Modules

- **async_utils**: Async-fetch urls
(Section 10, p. 31)
- **engines**: Abstract search engines.
(Section 11, p. 32)
- **github**: Common classes and entities in Github
(Section 12, p. 34)
- **gmail** (Section 13, p. 39)
- **google** (Section 14, p. 41)
 - **gauthenticator** (Section 15, p. 42)
- **parser**: Parse anything there is on the Internet.
(Section 16, p. 44)
- **selenium_bots**: Some utils methods for a selenium web-driver
(Section 17, p. 46)
- **web**: Deal with web-pages.
(Section 18, p. 48)
- **youtube**: Get rss feed for youtube channel.
(Section 19, p. 51)

9.2 Variables

Name	Description
<code>--package--</code>	Value: None

10 Module *hal.internet.async_utils*

Async-fetch urls

10.1 Variables

Name	Description
conn	Value: ProxyConnector(remote.resolve=True)
body	Value: await response.text()
tasks	Value: []
sem	Value: asyncio.Semaphore(max_concurrent)
responses	Value: asyncio.gather(* tasks)

11 Module *hal.internet.engines*

Abstract search engines.

11.1 Class *SearchEngineResult*

object └─
 hal.internet.engines.SearchEngineResult

Result of general search engine

11.1.1 Methods

```
__init__(self, title, link, description="")
x.__init__(...) initializes x; see help(type(x)) for signature
Overrides: object.__init__ extit(inherited documentation)
```

```
__str__(self)
str(x)
Overrides: object.__str__ extit(inherited documentation)
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __subclasshook__()
```

11.1.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

11.2 Class *SearchEngine*

object └─
 hal.internet.engines.SearchEngine

Internet general search engine

11.2.1 Methods

```
__init__(self, url, blank_replace="+")
```

```
:param url: string
```

```
    Url of search engine used in all query.
```

```
:param blank_replace:
```

```
    Every search engine has to replace blanks in query
```

```
Overrides: object.__init__
```

```
parse_query(self, query)
```

```
:param query: string
```

```
    Query to search engine.
```

```
:return: string
```

```
    Parse given query in order to meet search criteria of search engine
```

```
get_search_page(self, query, using_tor=False)
```

```
:param query: string
```

```
    Query to search engine.
```

```
:param using_tor: bool
```

```
    Whether use tor or not to fetch web pages
```

```
:return: string
```

```
    Get HTML source of search page of given query.
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),  
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

11.2.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

12 Module hal.internet.github

Common classes and entities in Github

12.1 Variables

Name	Description
GITHUB_URL_BASE	Value: "https://github.com"
API_TOKEN_FILE	Value: "api_token"
API_TOKEN	Value: <code>open(API_TOKEN_FILE).read().strip()</code>

12.2 Class GithubRawApi

object └─ **hal.internet.github.GithubRawApi**

Wrapper for generic Github API

12.2.1 Methods

```
__init__(self, url=API_URL_BASE, get_api_content_now=False)

:param url: str
    Url of API content to get
:param get_api_content_now: bool
    True iff you want to get API content response when building object
Overrides: object.__init__
```

```
__getitem__(self, key)

:param key: str
    Dictionary key to find specific user field
:return: str
    Dictionary value of given key
```

Inherited from object

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

12.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

12.3 Class GithubApi

Wrapper for generic Github API

12.3.1 Methods

<code>__init__(self, api_type)</code> <hr/> <p><code>:param api_type: str</code> Type of API to build</p> <p>Overrides: <code>object.__init__</code></p>
<code>get_trending_daily(lang="")</code> <hr/> <p><code>:param lang: str</code> Coding language</p> <p><code>:return: []</code> List of GithubUserRepository</p>

Inherited from `hal.internet.github.GithubRawApi`(Section 12.2)

`__getitem__()`

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

12.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

12.4 Class GithubUser

Model of a generic Github user profile

12.4.1 Methods

<code>__init__(self, username)</code>
<pre>:param username: str Username of user</pre> <p>Overrides: <code>object.__init__</code></p>
<code>get_repos(self)</code>
<pre>:return: [] of GithubUserRepository List of user repositories</pre>

```
get_starred_repos(self)
```

```
:return: [] of GithubUserRepository
        List of starred repositories
```

```
get_trending_daily_not_starred(self)
```

```
:return: []
        List of daily-trending repositories which are not starred by user
```

Inherited from hal.internet.github.GithubApi(Section 12.3)

```
get_trending_daily()
```

Inherited from hal.internet.github.GithubRawApi(Section 12.2)

```
__getitem__()
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

12.4.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

12.5 Class GithubUserRepository

```
object └─
```

```
hal.internet.github.GithubRawApi └─
```

```
    hal.internet.github.GithubApi └─
```

```
        hal.internet.github.GithubUserRepository
```

Model of a generic Github user repository

12.5.1 Methods

```
__init__(self, username, repository_name)
```

```
:param username: str
    Username of user
:param repository_name: str
    Name of repository
Overrides: object.__init__
```

```
__eq__(self, other)
```

Inherited from hal.internet.github.GithubApi(Section 12.3)

```
get_trending_daily()
```

Inherited from hal.internet.github.GithubRawApi(Section 12.2)

```
__getitem__()
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

12.5.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

13 Module *hal.internet.gmail*

13.1 Functions

`get_mime_message(subject, text)`

```
:param subject: str
    Subject of email
:param text: str
    Email content
:return: MIMEText
    Email formatted as HTML ready to be sent
```

`send_email(sender, msg, driver)`

```
:param sender: str
    Sender of email
:param msg: str
    Message to send to me
:param driver: GMailApiOAuth driver
    GMail authenticator
:return: void
    Sends email to me with this message
```

13.2 Class *GMailApiOAuth*

object └

hal.internet.google.gauthenticator.GoogleApiOAuth └

hal.internet.gmail.GMailApiOAuth

13.2.1 Methods

```
__init__(self, app_name, client_secrets_file, oauth_path)
```

```
:param app_name: str
    Name of app to display
:param client_secrets_file: str
    Path to client_secret.json file
:param oauth_path: str
    Path to gmail.json file
Overrides: object.__init__
```

```
create_driver(self)
```

```
:return: driver
    GMail API driver
```

Inherited from hal.internet.google.authenticator.GoogleApiOAuth(Section 15.1)

authenticate(), get_driver(), get_new_user_credentials(), get_user_credentials()

Inherited from object

__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()

13.2.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

14 Package *hal.internet.google*

14.1 Modules

- **gauthenticator** (*Section 15, p. 42*)

14.2 Variables

Name	Description
<code>--package--</code>	Value: None

15 Module *hal.internet.google.gauthenticator*

15.1 Class *GoogleApiOAuth*

object └─ *hal.internet.google.gauthenticator.GoogleApiOAuth*

15.1.1 Methods

<i>__init__</i> (<i>self</i> , <i>scope</i> , <i>app_name</i> , <i>app_secrets_path</i> , <i>user_credentials_path</i>)
--

<pre>:param scope: string scope of api :param app_name: str Name of app to display :param app_secrets_path: string path to app secrets :param user_credentials_path: string path to user credentials Overrides: object.__init__</pre>

<i>get_new_user_credentials</i> (<i>self</i>)
--

<pre>:return: credentials New user credentials file upon user prompt</pre>
--

<i>get_user_credentials</i> (<i>self</i>)
--

<pre>:return: string User credentials created via OAuth</pre>

authenticate (<i>credentials</i>)
--

<pre>:param credentials: string User authentication code created via OAuth :return: http Http authenticated credentials</pre>

get_driver (<i>self, name, version</i>)
--

<pre>:param name: string Name of driver :param version: string Version of driver :return: api driver Authenticates and creates new API driver to perform scope stuff</pre>
--

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

15.1.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

16 Module hal.internet.parser

Parse anything there is on the Internet.

16.1 Functions

is_string_well_formatted(*string*)

```
:param string: string
    String to parse
:return: bool
    True iff string is good formatted
```

html_stripper(*string*)

```
:param string: string
    String to parse
:return: string
    Given string with raw HTML elements removed
```

16.2 Variables

Name	Description
<code>--package--</code>	Value: <code>'hal.internet'</code>

16.3 Class HtmlTable

Table written in HTML language

16.3.1 Methods

<code>__init__(self, html_source)</code>
--

<code>:param html_source: string</code> Html source of table

Overrides: <code>object.__init__</code>

<code>parse(self)</code>

<code>:return: list of list</code> List of list of values in table

Inherited from str

`__add__()`, `__contains__()`, `__eq__()`, `__format__()`, `__ge__()`, `__getattr__()`, `__getitem__()`,
`__getnewargs__()`, `__getslice__()`, `__gt__()`, `__hash__()`, `__le__()`, `__len__()`, `__lt__()`, `__mod__()`,
`__mul__()`, `__ne__()`, `__new__()`, `__repr__()`, `__rmod__()`, `__rmul__()`, `__sizeof__()`, `__str__()`,
`capitalize()`, `center()`, `count()`, `decode()`, `encode()`, `endswith()`, `expandtabs()`, `find()`,
`format()`, `index()`, `isalnum()`, `isalpha()`, `isdigit()`, `islower()`, `isspace()`, `istitle()`, `isupper()`,
`join()`, `ljust()`, `lower()`, `lstrip()`, `partition()`, `replace()`, `rfind()`, `rindex()`, `rjust()`,
`rpartition()`, `rsplit()`, `rstrip()`, `split()`, `splitlines()`, `startswith()`, `strip()`, `swapcase()`,
`title()`, `translate()`, `upper()`, `zfill()`

Inherited from object

`__delattr__()`, `__reduce__()`, `__reduce_ex__()`, `__setattr__()`, `__subclasshook__()`

16.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

17 Module hal.internet.selenium_bots

Some utils methods for a selenium web-driver

17.1 Variables

Name	Description
<code>--package--</code>	Value: None

17.2 Class SeleniumForm

Great and simple static methods to deal with selenium web-drivers.

17.2.1 Methods

fill_form_field(*browser, field_name, field_value*)

```
:param browser: web-driver
    Browser to use to submit form.
:param field_name :string
    Name of field to fill
:param field_value: string
    Value with which to fill field.
:return: void
    Fill given field with given value.
```

```
fill_login_form(browser, username, username_field, user_password,  
user_password_field)
```

```
:param browser: web-driver  
    Browser to use to submit form  
:param username: string  
    Username of user to login  
:param username_field: string  
    Name of field to fill with username  
:param user_password: string  
    Password of user to login  
:param user_password_field: string  
    Name of field to fill with user password  
:return: void  
    Form filled with given information
```

```
submit_form(browser, button_name)
```

```
:param browser: web-driver  
    Browser to use to submit form.  
:param button_name: string  
    Name of button to press to submit form  
:return: void  
    Submit form.
```

18 Module *hal.internet.web*

Deal with web-pages.

18.1 Functions

is_url(*candidate_url*)

```
:param candidate_url: str
    Possible url to check for url
:return: bool
    True iff candidate is a valid url
```

download_url(*url*, *local_file*)

```
:param url: string
    Url to download
:param local_file: string
    Save url as this path
:return: void
    Download link to local file
```

download_to_file(*url*, *local_file*, *headers*=APP_VALID_HEADERS, *cookies*=None, *chunk_size*=1024)

```
:param url: str
    PDF url to download
:param local_file: str
    Save url as this path
:param headers: {}
    Headers to fetch url
:param cookies: {}
    Cookies to fetch url
:param chunk_size: int
    Download file in this specific chunk size
:return: void
    Download link to local file
```

18.2 Variables

Name	Description
CHROME_USER_AGENT	Value: ["Mozilla/5.0 (Windows; U; Windows NT 5.1; en-US) AppleWe...
URL_VALID_REGEX	Value: re.compile(r"^(?:http ftp)s?://"r"(:?" + r"(:?[A-Z0-9](?:...
APP_VALID_HEADERS	Value: {"User-Agent": "Mozilla/5.0", "Accept": "text/html,applic...

18.3 Class Webpage

object  **hal.internet.web.Webpage**

representation of URL (web page)

18.3.1 Methods

```
__init__(self, url, using_tor=False)
```

```
:param url: string
```

```
    Url of webpage
```

```
:param using_tor: bool
```

```
    Whether using tor or not to fetch source page
```

```
Overrides: object.__init__
```

```
parse_url(raw_url)
```

```
:param raw_url: url to parse
```

```
:return: parses correctly url
```

```
get_scheme(self)
```

```
:return: get scheme (HTTP, HTTPS, FTP ..) from given url
```

```
get_hostname(self)
```

```
:return: extract hostname from given url
```

```
get_domain(self)
```

```
:return: get domain from given url
```

```
get_html_source(self, tor=False)
```

```
:return: str
        HTML source of webpage
```

```
get_links(self, recall, timeout)
```

```
:param recall: max time to attempt to fetch url
:param timeout: max time (s) to wait for web_page response
:return: array of out_links
```

```
open_in_browser(self, times)
```

```
:param times: int
        Times to open webpage in browser
:return: void
        Open a web-driver and go to webpage
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

18.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

19 Module *hal.internet.youtube*

Get rss feed for youtube channel.

19.1 Functions

get_channel_page_from_name(*channel_name*)

```
:param channel_name: string
    name of channel (e.g in https://www.youtube.com/user/caseyneistat"
    you should take "caseyneistat")
:return string
    source page of youtube channel.
```

get_channel_id_from_name(*channel_name*)

```
:param channel_name: string name of channel (e.g in
    "https://www.youtube.com/user/caseyneistat" you should take
    "caseyneistat")
:return string
    id of youtube channel
```

get_channel_feed_url_from_id(*channel_id*)

```
:param channel_id: string
    id of channel (e.g in
    "https://www.youtube.com/channel/UC2zjki3bJIaXmgV_LBQ2jTg" you should
    take "UC2zjki3bJIaXmgV_LBQ2jTg")
:return string
    rss url feed of youtube channel
```

```

get_channel_feed_url_from_name(channel_name)

:param channel_name: string
    name of channel (e.g in "https://www.youtube.com/user/caseyneistat"
    you should take "caseyneistat")
:return string
    rss url feed of youtube channel

```

```

get_channel_feed_url_from_video(video_url)

:param video_url: string
    Url of video (e.g in https://www.youtube.com/watch?v=KB_iTbDrkxE)
:return string
    rss url feed of youtube channel.

```

19.2 Variables

Name	Description
YOUTUBE_USER_BASE_URL	Value: "https://www.youtube.com/user/"
YOUTUBE_FEED_BASE_URL	Value: "https://www.youtube.com/feeds/videos.xml?channel_id="

20 Package *hal.maths*

MATHS: important and scalable math functions

20.1 Modules

- **crypt**: Perform fast hash, encryption and calculations related to cryptography.
(Section 21, p. 54)
- **maths**: A few elegant and powerful mathematical functions.
(Section 22, p. 64)

20.2 Variables

Name	Description
<code>--package--</code>	Value: None

21 Module `hal.maths.crypt`

Perform fast hash, encryption and calculations related to cryptography.

21.1 Class MD5

```
object └─ hal.maths.crypt.MD5
md5 hash
```

21.1.1 Methods

```
__init__(self, string)
x.__init__(...) initializes x; see help(type(x)) for signature
Overrides: object.__init__ exitit(inherited documentation)
```

hash(<i>self</i>)
:return: hash plaintext

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

21.1.2 Properties

:return: sha512 hash

Inherited from object

`--delattr--()`, `--format--()`, `--getattr--()`, `--hash--()`, `--new--()`, `--reduce--()`, `--reduce_ex--()`,
`--repr--()`, `--setattr--()`, `--sizeof--()`, `--str--()`, `--subclasshook--()`

21.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>--class--</code>	

21.3.3 Class Variables

Name	Description
ALLOWED_SIZE	Value: [1, 224, 256, 384, 512]

21.4 Class ARC

```

object ┌
      │ hal.maths.crypt.ARC
ARC hash
```

21.4.1 Methods

`__init__(self, string, key, size)`

`x.__init__(...)` initializes `x`; see `help(type(x))` for signature

Overrides: `object.__init__` `extit`(inherited documentation)

`hash(self)`

:return: hash of given size

`hash_ar2(self)`

:return: des hash

`hash_arc4(self)`

:return: des3 hash

Inherited from object

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

21.4.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

21.4.3 Class Variables

Name	Description
<code>ALLOWED_SIZE</code>	Value: [2, 4]

21.5 Class HMAC

object —
 hal.maths.crypt.HMAC
 hmac hash

21.5.1 Methods

```
__init__(self, string, key)
```

`x.__init__(...)` initializes `x`; see `help(type(x))` for signature
 Overrides: `object.__init__` extit(inherited documentation)

```
hash(self)
```

```
:return: hash plaintext
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),  

__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

21.5.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

21.6 Class BLOWFISH

object —
 hal.maths.crypt.BLOWFISH
 blowfish hash

21.6.1 Methods

```
__init__(self, string, key)
```

x.__init__(...) initializes x; see `help(type(x))` for signature

Overrides: `object.__init__` `extit`(inherited documentation)

```
hash(self)
```

```
:return: hash plaintext
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),  
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

21.6.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

21.7 Class IDEA

```
object └─ hal.maths.crypt.IDEA
```

IDEA hash

21.7.1 Methods

```
__init__(self, string, key)
```

x.__init__(...) initializes x; see `help(type(x))` for signature

Overrides: `object.__init__` `extit`(inherited documentation)

hash(<i>self</i>)
:return: IDEA hash

change_key(<i>self</i>, <i>key</i>)
:param key: new key
:return: change key

encrypt(<i>self</i>)
:return: encrypt with key

Inherited from object

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

21.7.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

21.8 Class CAST128

```

object └─
          hal.maths.crypt.CAST128

```

CAST 128 hash

21.8.1 Methods

<code>__init__(<i>self</i>, <i>string</i>, <i>key</i>)</code>
<code>x.__init__(...)</code> initializes x; see <code>help(type(x))</code> for signature
Overrides: <code>object.__init__</code> <code>exitit</code> (inherited documentation)

encrypt (<i>self</i>)
:return: str Encrypt

decrypt (<i>self</i>)
:return: str Decrypt

Inherited from object

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

21.8.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

21.9 Class Dsa

```

object ┌
      │ hal.maths.crypt.Dsa
dsa hash
```

21.9.1 Methods

__init__ (<i>self</i> , <i>string</i>)
<code>x.__init__(...)</code> initializes <code>x</code> ; see <code>help(type(x))</code> for signature
Overrides: <code>object.__init__</code> extit(inherited documentation)

hash(<i>self</i>)
:return: hash plaintext

Inherited from object

__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
 __repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()

21.9.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

22 Module `hal.maths.maths`

A few elegant and powerful mathematical functions.

22.1 Functions

`get_prime(bits)`

:param bits: size of number to generate (bits)
:return: prime number of given size

`blum_blum_shub(seed, amount, prime0, prime1)`

:param seed: seeder
:param amount: amount of number to generate
:param prime0: one prime number
:param prime1: the second prime number
:return: pseudo-number generator

22.2 Variables

Name	Description
<code>LOW_PRIMES</code>	Value: [2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43, 47, ...]
<code>--package--</code>	Value: 'hal.maths'

22.3 Class Integer

object └─ `hal.maths.maths.Integer`

Big int std python won't recognize

22.3.1 Methods

```
__init__(self, string)
```

`x.__init__(...)` initializes `x`; see `help(type(x))` for signature

Overrides: `object.__init__` `extit`(inherited documentation)

```
is_naive_prime(self)
```

:return: bool

Checks if prime in very naive way

```
is_probably_prime(self)
```

:return: test with miller-rabin

```
test_miller_rabin(self, precision)
```

:param precision: number of rounds to perform (higher -> better precision)

:return: True iff probably prime

Inherited from object

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

22.3.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

22.4 Class *EightQueen*

8 queen problem solver

22.4.1 Methods

```
__init__(self, board_size)
```

`x.__init__(...)` initializes `x`; see `help(type(x))` for signature

Overrides: `object.__init__` `exitit`(inherited documentation)

```
under_attack(col, queens)
```

```
:param col: int
    Column number
```

```
:param queens: []
    List of queens
```

```
:return: bool
    True iff queen is under attack
```

```
solve(self, table_size)
```

```
:param table_size: int
    Size of table
```

```
:return: []
    List of possible solutions
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

22.4.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

23 Package *hal.ml*

23.1 Modules

- **analysis** (*Section 24, p. 68*)
 - **correlation**: Correlate values in arrays producing fancy good-looking matrices (*Section 25, p. 69*)
- **data** (*Section 26, p. 71*)
 - **parser**: Parsers for raw databases (*Section 27, p. 72*)
- **features**: Collection of methods to find weights of features and select the best ones. (*Section 28, p. 75*)
- **models** (*Section 29, p. 76*)
 - **classification**: Prediction methods based on classification algorithms. (*Section 30, p. 77*)
 - **pipelined**: Prediction methods based on multiple models mixed up. (*Section 31, p. 78*)
 - **regression**: Prediction methods based on regression algorithms. (*Section 32, p. 79*)
 - **time_series**: Multi-purpose prediction methods to be used in time-series. (*Section 33, p. 80*)
- **predict**: " General model to make prediction about everything. (*Section 34, p. 82*)
- **utils** (*Section 35, p. 84*)
 - **matrix**: Functions to deal with matrices. (*Section 36, p. 85*)
 - **misc**: Various tools and utilities to deal with database and machine learning. (*Section 37, p. 88*)

23.2 Variables

Name	Description
<code>--package--</code>	Value: None

24 Package *hal.ml.analysis*

24.1 Modules

- **correlation**: Correlate values in arrays producing fancy good-looking matrices
(*Section 25, p. 69*)

24.2 Variables

Name	Description
--package--	Value: None

25 Module *hal.ml.analysis.correlation*

Correlate values in arrays producing fancy good-looking matrices

25.1 Functions

get_correlation_matrix(*matrix*)

:param matrix: [] of []
List of features to get correlation matrix
:return: [] of []
correlation matrix

show_correlation_matrix(*correlation_matrix*, *title*, *feature_list*)

:param correlation_matrix: [] of []
Correlation matrix of features
:param title: str
Title of plot
:param feature_list: [] of str
List of names of features
:return: void
shows the given correlation matrix as image

get_correlation_matrix_of_columns(*headers_to_test*, *headers*, *data*)

:param headers_to_test: [] of str
List of columns to get correlation matrix of
:param headers: [] of str
List of all headers in matrix
:param data: [] of []
Matrix of float values
:return: [] of []
Correlation matrix of selected columns

show_correlation_matrix_of_columns(*title, headers_to_test, headers, data*)

```
:param title: str
    Title to show
:param headers_to_test: [] of str
    List of columns to get correlation matrix of
:param headers: [] of str
    List of all headers in matrix
:param data: [] of []
    Matrix of float values
:return: void
    Shows on screen correlation matrix of selected headers
```

save_correlation_matrix_of_columns(*title, headers_to_test, headers, data, out_file*)

```
:param title: str
    Title to show
:param headers_to_test: [] of str
    List of columns to get correlation matrix of
:param headers: [] of str
    List of all headers in matrix
:param data: [] of []
    Matrix of float values
:param out_file: str
    Output file
:return: void
    Saves correlation matrix of selected headers
```

save_correlation_matrix_of_data_files_in_folder(*folder_path*)

```
:param folder_path: str
    Folder containing logs data
:return: void
    Saves each file's correlation matrix of common headers
```

26 Package *hal.ml.data*

26.1 Modules

- **parser**: Parsers for raw databases
(Section 27, p. 72)

26.2 Variables

Name	Description
--package--	Value: None

27 Module *hal.ml.data.parser*

Parsers for raw databases

27.1 Functions

parse_csv_file (<i>file_path</i>) <hr/> <pre>:param file_path: str Path to file to parse :return: tuple [], [] of [] headers of csv file and data</pre>

27.2 Variables

Name	Description
<code>--package--</code>	Value: <code>'hal.ml.data'</code>

27.3 Class Parser

object —
 hal.ml.data.parser.Parser

Known Subclasses: *hal.ml.data.parser.CSVParser*

Mother of all data-files parsers

27.3.1 Methods

--init-- (<i>self</i> , <i>database_file</i>) <hr/> <pre>:param database_file: a raw .csv file that contains any data about anything Overrides: object.__init__</pre>

```
get_lines(self)
```

```
:return: [] of str
        Lines in file
```

Inherited from object

```
--delattr--(), --format--(), --getattr__(), --hash--(), --new--(), --reduce--(), --reduce_ex--(),
--repr--(), --setattr--(), --sizeof--(), --str--(), --subclasshook--()
```

27.3.2 Properties

Name	Description
<i>Inherited from object</i>	
--class--	

27.4 Class CSVParser

```
object └─
```

```
hal.ml.data.parser.Parser └─
```

```
hal.ml.data.parser.CSVParser
```

Parses CSV data files

27.4.1 Methods

```
--init--(self, database_file)
```

```
:param database_file: a raw .csv file that contains any data
about anything
```

```
Overrides: object.--init--
```

```
parse_data(self)
```

```
store values in array, store lines in array; the result is a 2D
matrix
```

Inherited from hal.ml.data.parser.Parser(Section 27.3)

get_lines()

Inherited from object

__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()

27.4.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

28 Module *hal.ml.features*

Collection of methods to find weights of features and select the best ones.

28.1 Functions

<code>select_k_best(<i>x_data</i>, <i>y_data</i>, <i>num_features</i>)</code>
select k best features in dataset

<code>get_best_features(<i>x_data</i>, <i>y_data</i>)</code>
finds the optimal number of features

<code>get_features(<i>x_data</i>, <i>y_data</i>, <i>num_features</i>)</code>
finds the optimal features

29 Package *hal.ml.models*

29.1 Modules

- **classification**: Prediction methods based on classification algorithms.
(Section 30, p. 77)
- **pipelined**: Prediction methods based on multiple models mixed up.
(Section 31, p. 78)
- **regression**: Prediction methods based on regression algorithms.
(Section 32, p. 79)
- **time_series**: Multi-purpose prediction methods to be used in time-series.
(Section 33, p. 80)

29.2 Variables

Name	Description
--package--	Value: None

30 Module `hal.ml.models.classification`

Prediction methods based on classification algorithms.

30.1 Functions

`extra_trees_classifier()`

:return: sklearn ExtraTreesClassifier
Classical extra tree classifier

`random_forest()`

:return: sklearn RandomForestClassifier
Classical random forest classifier

`knn()`

:return: sklearn KNN
Classical knn

`ada_boost()`

:return: sklearn AdaBoostClassifier
Classical Ada boost

`bayes_gauss()`

:return: sklearn GaussianNB
Slower than svr but equally accurate

`bayes_bernoulli()`

:return: sklearn BernoulliNB
Bayes-Bernoulli model

31 Module `hal.ml.models.pipelined`

Prediction methods based on multiple models mixed up.

31.1 Functions

<code>logistic_rbm()</code>
<hr/>
<code>:return: rbm -> logistic</code>

<code>anova_svm()</code>
<hr/>
<code>:return: anova -> svc</code>

32 Module `hal.ml.models.regression`

Prediction methods based on regression algorithms.

32.1 Functions

<code>support_vector_machine()</code>
<hr/>
<code>:return:</code> sklearn svm.SVR Classical polynomial SVM

<code>logistic_regression()</code>
<hr/>
<code>:return:</code> sklearn LogisticRegression Logistic regression model

33 Module *hal.ml.models.time_series*

Multi-purpose prediction methods to be used in time-series.

33.1 Functions

test_stationary(*time_series*)

:param *time_series*: []
:return: void
Shows plot and checks for stationary series

get_str_end(*dates*, *end*)

:param *dates*: []
List of str date
:param *end*: float
End of prediction
:return: str
End of prediction

arma(*dates*, *values*, *start*=None, *end*=None, *plot*=False)

Predict days values using ARMA algorithm.
:param *dates*: list of str date
:param *values*: list of float values
:param *start*: start predicting in this day
:param *end*: end of prediction
:param *plot*: whether to plot or not values in graph

arima(*dates*, *values*, *start*=None, *end*=None)

Predict days values using ARIMA algorithm.
:param *dates*: list of str date
:param *values*: list of float values
:param *start*: start predicting in this day
:param *end*: end of prediction

var(*dates, values*)

Predict days values using ARIMA algorithm.

:param dates: list of str date

:param values: list of float values

dynamic_var(*dates, values*)

Predict days values using ARIMA algorithm.

:param dates: list of str date

:param values: list of float values

34 Module *hal.ml.predict*

" General model to make prediction about everything.

34.1 Class *BasePrediction*

object └─ **hal.ml.predict.BasePrediction**

The mother of all predictions

34.1.1 Methods

```
__init__(self, model, rounds)
```

```
:param model: sklearn.model
    Model chosen for prediction
:param rounds: int
    Number of rounds to repeat prediction (and get better results)
Overrides: object.__init__
```

```
train(self, x_data, y_data)
```

```
:param x_data: data
    Input x
:param y_data: data
    Input y
:return: void
    Train model on inputs
```

Inherited from object

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

34.1.2 Properties

continued on next page

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

35 Package `hal.ml.utils`

35.1 Modules

- **matrix**: Functions to deal with matrices.
(Section 36, p. 85)
- **misc**: Various tools and utilities to deal with database and machine learning.
(Section 37, p. 88)

35.2 Variables

Name	Description
<code>--package--</code>	Value: None

36 Module *hal.ml.utils.matrix*

Functions to deal with matrices.

36.1 Functions

precision(*matrix*)

```
:param matrix: 2 x 2 matrix
  True positives are in [0,0], true negatives are in [1,1],
  false negatives are in [0,1] and false positives are in [1,0]
:return: float
  Calculates accuracy on database
```

recall(*matrix*)

```
:param matrix: 2 x 2 matrix
  True positives are in [0,0], true negatives are in [1,1],
  false negatives are in [0,1] and false positives are in [1,0]
:return: float
  Calculates recall on database
```

true_neg_rate(*matrix*)

```
:param matrix: 2 x 2 matrix
  True positives are in [0,0], true negatives are in [1,1],
  false negatives are in [0,1] and false positives are in [1,0]
:return: float
  Calculates true negative rate on database
```

accuracy(*matrix*)

```
:param matrix: 2 x 2 matrix
  True positives are in [0,0], true negatives are in [1,1],
  false negatives are in [0,1] and false positives are in [1,0]
:return: float
  Calculates accuracy on database
```

f1_score(*matrix*)

:param matrix: 2 x 2 matrix
True positives are in [0,0], true negatives are in [1,1],
false negatives are in [0,1] and false positives are in [1,0]
:return: float
Calculates F1 score on database

get_column_of_matrix(*column_index, matrix*)

:param column_index: int >= 0
Column index to take
:param matrix: [] of []
Matrix
:return: []
Column of array at position given

get_subset_of_matrix(*headers_to_sample, all_headers, data*)

:param headers_to_sample: [] of str
List of columns to get
:param all_headers: [] of str
List of all headers in matrix
:param data: [] of []
Matrix of float values
:return: [] of []
Correlation matrix of selected columns

remove_column_from_matrix(*headers, header_to_remove, data*)

:param headers: [] of str
Column names
:param header_to_remove: str
Name of column to remove
:param data: matrix ([] of [])
Data
:return: headers, data
Headers without header removed and data without column removed

add_columns_to_matrix(*headers, data, new_headers, new_columns*)

:param headers: headers: [] of str
 Column names
:param data: matrix ([] of [])
 Data
:param new_headers: [] of str
 Names of new columns
:param new_columns: ([] of [])
 New columns to add
:return: headers, data
 New headers (with new headers) and data with new columns

37 Module *hal.ml.utils.misc*

Various tools and utilities to deal with database and machine learning.

37.1 Functions

pearson (<i>lst1</i> , <i>lst2</i>)
Pearson coefficient of arrays

normalize_array (<i>arr</i>)
<pre>:param arr: [] of float Array of floats :return: [] of float Normalized (in [0, 1]) input array</pre>

38 Package *hal.mongodb*

38.1 Modules

- **utils:** Various utilities to deal with MondoDB databases
(*Section 39, p. 90*)

38.2 Variables

Name	Description
--package--	Value: None

39 Module *hal.mongodb.utils*

Various utilities to deal with MondoDB databases

39.1 Functions

get_documents_count(db_name)

:param db_name: str
 Name of db
:return: int
 Number of documents in db

get_documents_in_collection(db_name, collection_name, with_id=True)

:param db_name: str
 Name of db
:param collection_name: str
 Name of collection
:param with_id: bool
 True iff each document should also come with its id
:return: [] of {}
 List of documents in collection in database

get_documents_in_database(db_name, with_id=True)

:param db_name: str
 Name of db
:param with_id: bool
 True iff each document should also come with its id
:return: [] of {}
 List of documents in collection in database

40 Package hal.profile

40.1 Modules

- **mem:** Profile OS memory
(Section 41, p. 92)
- **performance:** Perform benchmarks and tests on your PC.
(Section 42, p. 93)

40.2 Variables

Name	Description
__package__	Value: None

41 Module *hal.profile.mem*

Profile OS memory

41.1 Functions

<code>get_memory_usage()</code>
<hr/>
<code>:return: float</code> MB of memory used by this process

<code>force_garbage_collect()</code>
<hr/>
<code>:return: void</code> Releases memory used

42 Module hal.profile.performance

Perform benchmarks and tests on your PC.

42.1 Class EightQueenTest

```
object └─ hal.profile.performance.EightQueenTest
```

Test CPU by solving eight-queen problem

42.1.1 Methods

```
__init__(self, size)

x.__init__(...) initializes x; see help(type(x)) for signature
Overrides: object.__init__ exitit(inherited documentation)
```

```
welcome()

:return: string
    Welcomes user to this test sessions
```

```
introduction()
```

```
:return: string  
Welcomes user to this test sessions
```

```
run_test_with_size(size)
```

```
:param size: int
    Number of rows in grid
:return: int
    Time to solve problem with given size
```

update_std_out_and_log (<i>self</i> , <i>string</i>)

<pre> :param string: string Stuff to print :return: void Prints to stdout and updates log </pre>
--

start (<i>self</i>)

<pre> :return: void Starts profiling </pre>

Inherited from object

__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()

42.1.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

43 Package hal.streams

43.1 Modules

- **pretty_table**: Pretty prints table in SQL style
(Section 44, p. 96)

43.2 Variables

Name	Description
--package--	Value: None

44 Module *hal.streams.pretty_table*

Pretty prints table in SQL style

44.1 Functions

get_optimal_column_widths(*labels, data*)

```
:param labels: [] of str
    List of labels of data
:param data: ([] of []) of anything
    Matrix of any type
:return: [] of int
    Length of longest data in each column (labels and data)
```

get_pretty_row(*data, widths, filler, splitter*)

```
:param data: [] of anything
    List of data
:param widths: [] of int
    Length of longest data in each column
:param filler: char
    Fill empty columns with this char
:param splitter: char
    Separate columns with this char
:return: str
    Pretty formatted row
```

get_blank_row(*widths, filler='-', splitter='+'*)

```
:param widths: [] of int
    Length of longest data in each column
:param filler: char
    Fill empty columns with this char
:param splitter: char
    Separate columns with this char
:return: str
    Pretty formatted blank row (with no meaningful data in it)
```

```
pretty_format_row(data, widths, filler=' ', splitter='|')
```

```
:param data: [] of anything
    List of data
:param widths: [] of int
    Length of longest data in each column
:param filler: char
    Fill empty columns with this char
:param splitter: char
    Separate columns with this char
:return: str
    Pretty formatted row
```

```
pretty_format_table(labels, data, line_separator='\n')
```

```
:param labels: [] of str
    List of labels of data
:param data: ([] of []) of anything
    Matrix of any type
:param line_separator: str
    Separate each new line with this
:return: str
    Pretty formatted table (first row is labels, then actual data)
```

44.2 Variables

Name	Description
<code>__package__</code>	Value: None

45 Package *hal.strings*

45.1 Modules

- **utils**: Typical operations on strings made easy
(*Section 46, p. 99*)

45.2 Variables

Name	Description
--package--	Value: None

46 Module *hal.strings.utils*

Typical operations on strings made easy

46.1 Functions

how_similar_are(*str1*, *str2*)

```
:param str1: str
    First string
:param str2: str
    Second string
:return: float in [0, 1]
    Similarity of a VS b
```

get_average_length_of_word(*words*)

```
:param words: [] of str
    Words
:return: float
    Average length of word on list
```

46.2 Variables

Name	Description
<code>--package--</code>	Value: <code>'hal.strings'</code>

47 Package hal.tests

47.1 Modules

- **utils:** Tools to ease testing process
(Section 48, p. 101)

47.2 Variables

Name	Description
--package--	Value: None

48 Module *hal.tests.utils*

Tools to ease testing process

48.1 Functions

```
battery_test(assert_type, tests, function, args=None)
```

```
:param assert_type: function
    Type of assert
:param tests: dict
    key= params in function, value= what should be the result
:param function: function
    Function to apply
:param args: *
    Extra args for function to call
:return: bool
    True iff all tests pass
```

```
random_name()
```

```
:return: str
    Pseudo-random name
```

48.2 Variables

Name	Description
<code>--package--</code>	Value: <code>'hal.tests'</code>

49 Package hal.time

49.1 Modules

- **profile**: Tired of formatting ETA times? This is just for you
(Section 50, p. 103)
- **utils**: Parse, convert time formats
(Section 51, p. 104)

49.2 Variables

Name	Description
<code>--package--</code>	Value: None

50 Module *hal.time.profile*

Tired of formatting ETA times? This is just for you

50.1 Functions

```
get_time_eta(total_done, total, start_time)
```

```
:param total_done: int
    Item processed
:param total: int
    Total number of items to process
:param start_time: time
    Time of start processing items
:return: time
    Time to go
```

```
print_time_eta(time_to_go, note='')
```

```
:param time_to_go: {}
    Result of a call get_time_eta(...)
:param note: str
    Notes to append to stdout
:return: void
    Prints debug info to screen
```

50.2 Variables

Name	Description
<code>--package--</code>	Value: <code>'hal.time'</code>

51 Module *hal.time.utils*

Parse, convert time formats

51.1 Functions

parse_hh_mm_ss(*string*)

```
:param string: str
    Hours, minutes and seconds in the form hh:mm:ss to parse
:return: datetime.time
    Time parsed
```

get_seconds(*string*)

```
:param string: str
    Datetime in the form %H:%M:%S
:return: int
    Seconds in time
```

parse_hh_mm(*string*)

```
:param string: str
    Hours and minutes in the form hh:mm to parse
:return: datetime.time
    Time parsed
```

51.2 Variables

Name	Description
MONTHS_NAMES	Value: [datetime.strptime(datetime(year=1, month= m, day= 1), "...
MONTHS	Value: {i+ 1: MONTHS_NAMES [i] for i in range(len(MONTHS_NAMES))}

52 Package *hal.wrappers*

52.1 Modules

- **methods:** Typical (and useful) function wrappers
(*Section 53, p. 106*)

52.2 Variables

Name	Description
--package--	Value: None

53 Module *hal.wrappers.methods*

Typical (and useful) function wrappers

53.1 Functions

<code>handle_exceptions(<i>function</i>)</code>
<code>:param function: callback function function to wrap</code>
<code>:return: callback function return type wraps callback function</code>
